## Working towards a sustainable future

It has always been important to us to develop ecological and sustainable wipe solutions. Thanks to the isotropic fiber orientation and our spunlace technology, we are able to process nonwovens such as viscose, lyocell, or even natural fibers (e.g. flax or hemp) where their overall stability is comparable to materials with synthetic fibers.

For Norafin, the use of renewable raw materials is a crucial component in our sustainable production chain. Our brand **Norafin® ECOLINE** comprises cleaning wipes which consist of renewable and recyclable raw materials.

For our nonwovens, we prefer the use of VEOCEL™ or natural fibers to support the production of biodegradable wipes.

- ✓ 100% plastic free viscose
- ✓ biodegradable
- ✓ recyclable
- ✓ weight range between 30 - 200 g/m<sup>2</sup>
- ✓ different colors and structures

Purely for you  
VEOCEL™ is a trademark  
of Lenzing AG

# Wipe solutions made with natural fibers like flax, hemp, and sheep's wool

Sustainable solutions with natural fibers are the latest innovations at Norafin.

In addition to years of experience in the production and development of products made from 100% flax fibers, nonwovens made of high quality hemp from Europe have also recently become part of our permanent portfolio. Combined with the lyocell skin fiber, wipes become durable, biodegradable and make a beautiful skin feeling.

Our newly developed nonwoven combines the natural benefits of sheep's wool with the functionality and softness of viscose. Manufactured using our chemical-free spunlace technology, it is an eco-friendly, high-performance solution for a variety of applications that does not require chemical binders.

Norafin places a high emphasis on the sustainability of its products and on the minimization of its ecological footprint. The use of sustainable raw materials is an important concern of our philosophy.

- ✓ 100% biodegradable
- ✓ renewable raw materials
- ✓ different structures

*We are your contact for nonwoven solutions in the field of hygiene and cleanliness.*
